

SP15 Softphone

OVERVIEW

The SP15 softphone is an ideal business solution for anyone interested in bringing more efficiency and mobility to their communications. Especially well-suited for the remote worker, or the gadget-minded individual looking to free up desk space, the SP15 softphone is an innovative application tool that puts power and functionality of the Avanti 3015 phone station directly onto your PC or laptop.

The SP15 softphone is an Avanti station and provides significant advantages that no other software telephone has. As a full-fledged extension of the system, it enables full access to all of the system functions and resources. It is part and parcel of the *Advance/IP*.

The SP15 softphone lets you work from home, the field office or anywhere on the road where Internet access is available. It provides a direct link into the office telecommunication system as if you were in the middle of the executive suite. Simply connect your PC to the Internet, fire up the soft phone application and enjoy the same functionality you would have with a desktop phone. With Microsoft Outlook integration all your contacts are readily available for outbound dialing or inbound screen pops.

With a superior voice quality supporting G.711 and G.729 codecs, the SP15 softphone user interface is standardized to match the Avanti family of *Advance/IP* stations. It therefore has a similar look and feel, which makes for a zero-time learning curve.
